TECHNICAL SUMMARY

Machine Learning Engineer with hands-on expertise in building end-to-end ML/DL pipelines, including object detection (YOLO) and Generative AI systems using RAG and LangGraph. Skilled in designing solutions that integrate deep learning models with modern LLM-based agentic workflows.

EDUCATION

FAST NUCES Lahore BS Computer Science CGPA: 3.63	Sept. 2023 - June 2027
Relevant Courses: Data Structures, OOP, Databases, MLOps, Web programming, AI	
Lahore Grammar School – A Levels (Cambridge International)	Sept. 2021 - May 2023
Subjects: Information Technology (A), Mathematics (A*), Accounting (A*)	
Beaconhouse School System – O Levels (Cambridge International)	Sept. 2018 - May 2021
Achieved 9 A* including Physics, Chemistry, Biology, Mathematics, English, and Global Perspective	
Languages: English(fluent) and Urdu(fluent)	

TECHNICAL SKILLS

Languages: C++, C, JavaScript, HTML, CSS, SQL, Python, Java
AI/ML: Tensorflow, LangChain, LangGraph, Pandas, Numpy, Scikit-learn, RAG
Tools: VS Code, GitHub, MS Access, MS Excel, Adobe Illustrator, SSMS, Dagshub, Dockerhub, DVC, AWS, n8n

EXPERIENCE

AI/ML Intern at Devsinc	June 2026 - July 2026
- Gained hands-on experience across the ML/DL spectrum — from EDA and traditional model training to building and fine-tuning ANNs, CNNs, RNNs, LSTMs, GRUs, and YOLO for object detection. - Implemented practical GenAI applications including RAG pipeline, LangGraph-based agentic workflows, and Fooocus AI for image generation.	

CERTIFICATION AND BOOTCAMPs

AWS Academy Graduate - Cloud Foundations
Applied AI Engineering Workshop(Agentic AI) - InvoZone

PROJECTS

RAG-Powered Codebase Q&A Assistant	Aug. 2026
- Built a hybrid RAG pipeline (BM25 + vector search + cross-encoder reranking) for codebase Q&A over a real GitHub repo, using AST- and heading-based chunking: improved retrieval recall@5 to 89.58% by fixing BM25 tokenization gaps, restructuring changelog chunking, and correcting a scoring bug in the evaluation harness. - Designed a 50-question hand-labeled evaluation set spanning semantic, exact-identifier, filename-scoped, and unanswerable queries, measuring retrieval and generation quality independently (achieved 100% faithfulness, 96% citation accuracy).	
Debate Arena (LangGraph)	July 2026
- Built a multi-agent AI debate platform using LangGraph and LangChain, where autonomous LLM agents engage in evidence-based debates, perform document retrieval and dataset querying, handle moderator interruptions, and generate neutral post-debate summaries through a graph-based orchestration workflow. - Engineered a robust evaluation and reasoning pipeline featuring tool integration, conversation state management, agent routing, reliability monitoring (latency, failures, and tool usage), grounding against reference documents, automated scoring, and structured debate analytics to assess argument quality and factual consistency.	
OwrPlan (Scheduling Application)	April. 2026
- Built a user-centric scheduling platform using the MERN stack, focused on intuitive UX and seamless coordination for individuals and groups. - Designed interactive schedule visualizations, implemented an intelligent best-time suggestion algorithm based on customizable constraints and shared expense tracking	
Emotional Intelligence Assistant (AI with MERN stack)	Feb. 2026 - May. 2026
- Developed a full-stack emotional intelligence platform using the MERN stack, integrating a machine learning model trained on lifestyle factors and stress levels to provide personalized coping strategies. - Implemented an AI-powered chatbot trained on empathetic conversation datasets	
AI-Powered Recipe Generator (MLOps Project)	Oct. 2025 - Nov. 2025
- Built and deployed an end-to-end ML pipeline on AWS, integrating data versioning (DVC), experiment tracking (MLflow), and a YOLOv8 model for image-based ingredient recognition - Developed a full-stack web app enabling users to upload ingredients and receive AI-generated recipes in real time
